## **DETAILED ACTION**

### ***Specification***

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "**means**" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

### ***Claim Rejections - 35 USC § 112***

2. Claims 23-27, 45-47 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The following limitations lack antecedent basis:

"the non-operating" (claim 23, line 12; claim 45, line 9).

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1-51 are rejected under 35 U.S.C. § 102(e) as being anticipated by Shioya et al. (U.S. 6,260,939)

Shioya (fig.17, col. 12-14) discloses every element of the instant claimed apparatus and method for detecting, discriminating image defective caused by inoperative nozzle(s), and controlling the selected normal nozzle(s) to complementarily print in place of the missing dot of a respective color by a respective a different number of tone level signals, combination of ink materials, ink drops.

***Pertinent Prior art***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

EP Patent 559370 to Suzuki et al. (page 13, claims 17-22) discloses complementarily printing when defective nozzle(s) are detected.
